

The Three Prisoners' Dilemma Fall 2008: Results

There were 18 entries plus 5 default strategies in the tournament.

The following information is presented in the table below:

Rank The tournament was run 5 times; this is the range of your rank in the 5 runs.

First How likely is the strategy to fink in the first round? (observed probability out of 100 trials).

Stable The score when the strategy is played against itself. If the three instances of the strategy did not get the same score, the scores were averaged, and there is a "*" after the score.

vsQuiet, vsFinky, vsBoth, vsTease These are measurements of how polite, defensive, encouraging, and forgiving the strategies are. These four columns are the result of playing a 100-round match against, respectively, 2 Quiet, 2 Finky, 1 Quiet with 1 Finky, and 2 Tease players, respectively; a TeasePlayer finks until both opponents fink, after which point it stays quiet to the end. In these 4 sections **nf** is the number of times the strategy on that row finked, and **ff** is the first round in which it finked ("*" means it did not fink).

Rank	Name	Score	First	Stable	vsQuiet		vsFinky		vsBoth		vsTease	
					fr	nd	fr	nd	fr	nd	fr	nd
