

CO 456 Final Project Scheduling Sheet

November 5, 2008

Project Clarification: the original project handout said “it should introduce something new.” By this we mean a new topic beyond what has already been covered in CO 456. It doesn’t have to include a “research nobody has ever done” component.

Academic Integrity Reminder: you should acknowledge all sources used in preparing your work. This includes books, articles, and webpages. E.g. if you use a figure that is a copy or very similar to one in another source, you should say “Adapted from [1]” where [1] is a reference to your numbered bibliography. Any reasonable format is OK. You don’t need to include a bibliography in your presentation, only in your paper. Nonetheless it would be good to briefly mention your sources in your talk.

Scheduling: Please write down the name of the people in your group. There are four possible days to present on: November 18, 20, 25, 27. If you cannot present on some of these days for some reason, *indicate the days you are unavailable and the reason*. If you are doing a topic that builds upon impartial combinatorial game theory, that is a good enough reason not to present on November 18 or 20.

Scheduling aside: For anyone who presents on November 18 or 20, I will give you a 1-week extension on assignment 6 (making it due on November 25).
